1. Introduction

1.1 Purpose

The Sweetwater Authority (Authority) retained NBS to conduct a comprehensive utility rate study for its water enterprise funds. The Authority had several objectives and goals in mind for this study including meeting revenue requirements, reviewing the rising costs of providing services, funding capital improvements and changes in costs, and complying with all applicable legal requirements (e.g., California Constitution Article XIII D, Section 6, which is commonly referred to as Proposition 218 [Prop 218]). The Authority's broader objectives in this study include ensuring adequate funding for operating and capital costs, maintaining adequate reserves, ensuring revenue stability in utility rates. The rates resulting from this study were developed in a manner that is consistent with industry standard cost-of-service principles. In addition to documenting the rate study methodology, this report is provided with the intent to assist the Authority in its continuing effort to maintain transparent communications with the residents and community it serves.

In developing new rates for the Authority's enterprise funds, NBS worked cooperatively with Authority staff and the Sweetwater Authority Board (Board) in selecting the appropriate rate alternatives that address the Authority's goals and objectives. Based on input provided by Authority staff, NBS proposes the rates summarized in this report. The Board has the final decision regarding the adoption of the proposed rates and whether to proceed with the Prop 218 approval process.

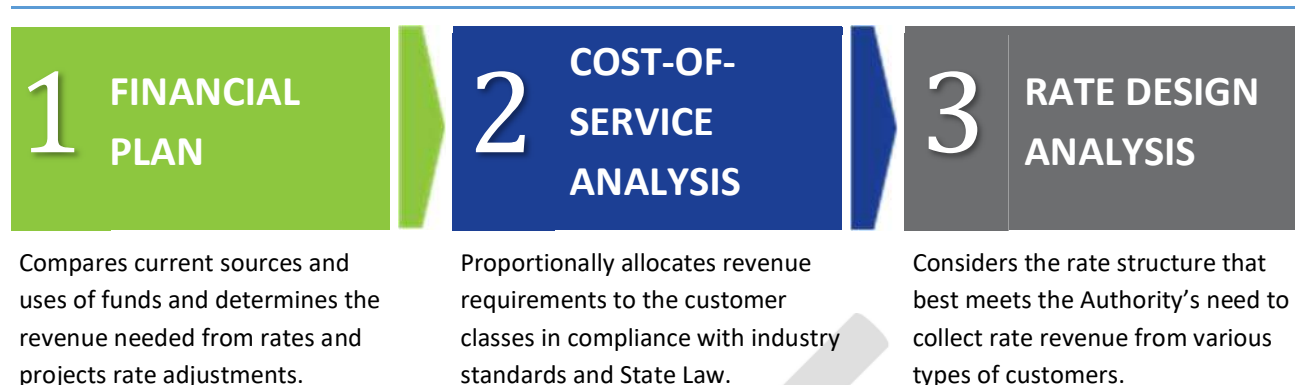

1.2 Overview of the Study

Comprehensive rate studies, such as this one, typically include three components: (1) preparation of a financial plan that identifies the net revenue requirements for the utility; (2) analysis of the cost to serve each customer class, and (3) the rate structure design. These steps are shown in **Figure 1** and are intended to follow industry standards and reflect the fundamental principles of cost-of-service rate making embodied in the American Water Works Association's (AWWA) *Principles of Water Rates, Fees, and Charges*,¹ also referred to as Manual M1, to the extent such standards and principles are consistent with California's unique legal framework for rate setting.

Rate studies also address requirements under Prop 218 that rates not exceed the cost of providing the service and be proportionate to the cost of providing service for all customers. In terms of the chronology of the study, the three steps shown in **Figure 1** represent the order in which they were performed in this study.

¹ *Principles of Water Rates, Fees, and Charges*, Manual of Water Supply Practices, Manual M1, American Water Works Association (AWWA), 7th Edition, 2017.

Figure 1. Primary Components of a Rate Study

NBS projected revenues and expenditures, developed net revenue requirements, performed cost-of-service rate analyses, and developed new water rates for the Authority using this approach. The following sections in this report present an overview of the methodologies, assumptions, and data used along with the financial plans and rates developed. Detailed tables and figures documenting the development of the proposed rates are provided in the *Appendix*.

The Authority provided NBS with the data necessary to conduct the study, including historical, current, and projected revenues and expenditures, number of customer accounts, and water consumption data along with other operational and capital cost information.

FINANCIAL PLAN

As a part of the rate study, NBS projected revenues and expenditures on a cash-flow basis for the next three (3) years. The amount of rate revenue required, that will allow reserves to be maintained at the recommended levels, is known as the net revenue requirement. As current rate revenue falls short of the net revenue requirement, rate adjustments – or more accurately, adjustments in the total revenue collected from rates – are recommended. This report presents an overview of the methodologies, assumptions, and data used along with the financial plan and proposed rates developed in this study.²

COST-OF-SERVICE ANALYSIS

The basic purpose of the cost-of-service analysis (COSA) is to fairly and equitably allocate costs to customer classes. The cost-of-service analysis consists of two major components: (1) the classification of expenses, and (2) the allocation of costs to customer classes. For example, a key task is the “classification” of the water revenue requirements into the following categories:

- Commodity-related costs
- Capacity-related costs
- Customer service-related costs

Further details are discussed below and documented in the *Appendix*.

² The complete financial plans are available in the *Appendix*.

RATE DESIGN ANALYSIS

During the rate design phase of the study, NBS and Authority staff worked together to develop rate alternatives that will meet the Authority's objectives. It is important for the Authority to send proper price signals to its customers about the actual cost of providing service. This objective is typically addressed through both the magnitude of the rate adjustments and the rate structure design. In other words, both the amount of revenue collected and the way in which the revenue is collected from customers are important.

Several criteria are typically considered in setting rates and developing sound rate structures. The fundamentals of this process have been well documented in several rate-setting manuals, such as AWWA's Manual M1. The foundation for evaluating rate structures is generally credited to James C. Bonbright in *Principles of Public Utility Rates*,³ which outlines pricing policies, theories, and economic concepts along with various rate designs. The following is a simplified list of the attributes of a sound rate structure:

- Rates should be easy to understand from the customer's perspective.
- Rates should be easy to administer from the utility's perspective.
- Rates should be equitable and non-discriminating (i.e., cost-based).
- Rates should promote the efficient allocation of the resource.
- There should be continuity in the rate making philosophy over time.
- Rates should address other utility policies (e.g., conservation and economic development).
- Rates should provide month-to-month and year-to-year revenue stability.

RATE STRUCTURE TERMINOLOGY

This section covers basic rate design criteria that NBS and Authority staff considered as a part of their review of the rate structure alternatives. One of the most fundamental points in considering rate structures is the relationship between fixed and variable costs. Fixed costs, such as debt service and personnel costs, typically do not vary with the amount of water consumed. In contrast, variable costs, such as the cost of purchased water, chemicals, and electricity, tend to change with the quantity of water sold. Most rate structures contain a fixed, or minimum, charge in combination with a volumetric charge.

Fixed Charges – Fixed charges can be called base charges, minimum monthly charges, customer charges, fixed meter charges, etc. Fixed charges for water utilities typically increase by meter size. For example, a customer with a 2-inch meter has a fixed meter charge that is more than five times greater than the typical residential customer based on the safe operating capacity of the meter.⁴ Since a large portion of utility costs are typically related to meeting capacity requirements, individual capacity demands are important in establishing equitable rates for customers.

Variable (Consumption-Based) Charges – In contrast to fixed charges, variable costs, such as purchased water, groundwater replenishment costs, and the cost of electricity used in pumping water and chemicals

³ James C. Bonbright, Albert L. Danielsen, and David R. Kamerschen, *Principles of Public Utility Rates*, Arlington, VA: Public Utilities Report, Inc., Second Edition, 1988, pp. 383-384.

⁴ *Principles of Water Rates, Fees, and Charges*, Manual of Water Supply Practices, Manual M1, AWWA, 7th Edition, 2017, pp. 151-152.

for treatment, tend to change with the quantity of water produced. For a water utility, variable charges are calculated based on a metered consumption per unit price (e.g., per 100 cubic feet, or HCF).

Uniform (Single-Tier) Water Rates – There are significant variations in the basic philosophy of variable charge rate structure alternatives. Under a uniform (single tier) rate structure, the cost per unit does not change with consumption and, therefore, provides a simple and straightforward approach from the customer’s perspective and in terms of the Authority’s rate administration.

Tiered Water Rates – The 2015 San Juan Capistrano court decision held that water agencies may only charge tiered rates if they can show that the tiered rates are proportionate to the agency’s higher costs to serve those customers within each tier, meaning that caution must be used to ensure that customers are appropriately allocated costs that meet legal requirements.

KEY FINANCIAL ASSUMPTIONS

The following is a summary of the key financial assumptions used in the analyses; capital and operational fund targets reflect input from Authority staff to meet specific utility objectives.

Funding of Capital Projects – The capital improvement costs will be funded with a combination of cash in reserves and the additional revenue generated from the proposed rate increases. The capital projects listed in the financial plan are from the Authority’s capital improvement program. The analysis assumes:

- Capital costs attributable to existing customers are funded using rate revenue.
- Capital costs attributable to growth are funded by revenue from the impact fee reserves.

Reserve Targets – The Authority maintains reserves for operations, capital, and other specific needs. The details of the reserve targets are covered in their respective sections of this report.

Inflation and Growth Projections – Assumptions were made in the analysis regarding cost inflation to project future revenues and expenses for the study period. The following inflation factors were used in the analysis:

- Customer growth is estimated at 0.32% per year.⁵
- General cost inflation is set at 3.93% annually.⁶
- Labor cost inflation is set at 3.50% annually.⁷
- Energy cost inflation is set at 12.43% annually.⁸
- Electricity cost inflation is set at 5.64% annually.⁹
- Fuel & Utilities cost inflation is set at 5.24% annually.¹⁰

⁵ Customer growth based on data from the Authority’s 2021 Capacity Fee Study. The growth rate was estimated on recent actual experience and the anticipation that the majority of growth will be in multi-family housing development.

⁶ General cost inflation is based on the 5-year average annual change in the Consumer Price Index for all Urban Consumers in the San Diego-Carlsbad, CA area.

⁷ Labor cost inflation is based on the 5-year average annual change in the Quarterly Census of Employment and Wages for San Diego-Carlsbad, CA.

⁸ Energy cost inflation is based on the 5-year average annual change in the Consumer Price Index for all Urban Consumers in the San Diego-Carlsbad, CA area.

⁹ Electricity cost inflation is based on the 5-year average change in the Consumer Price Index for San Diego-Carlsbad, CA area.

¹⁰ Fuel & Utilities cost inflation is based on the 5-year average annual change in the Consumer Price Index - Average Price Data for Fuels and related products and power. This factor is used for utility costs other than electricity.

- Construction cost inflation is set at 3.50% annually.¹¹
- Water purchases inflation factor is set at 5.0% annually.¹²

These inflation factors are based on long-term trends; therefore, the Authority should re-examine these factors in another year to assess the impacts on utility costs and whether projected rate increases will be sufficient for the remainder for the rate adoption period.

2. Water Rate Study

2.1 Key Water Rate Study Issues

The Authority's water rate analysis was undertaken with a few specific objectives, including:

- Generating sufficient revenue to meet anticipated operating and maintenance costs and fund necessary capital improvement projects for the next three years.
- Continuing with a rate design that promotes revenue stability.
- Verifying the cost-of-service linkage between the current rate structure and the proposed water rates, including the residential tiered water rates.
- Maintaining adequate reserve levels to ensure continuity in operations.
- Complying with the legal requirements of Prop 218 to ensure the cost of providing service is properly allocated amongst user classifications. This was the basis for eliminating tiered water rates.

Proposition 218 does not mandate a specific rate structure. Many different rate structures can be compliant with Proposition 218, so long as they meet the substantive requirements of article XIII D, section 6 of the California Constitution. Accordingly, NBS developed various water rate alternatives as requested by Authority staff over the course of this study. All rate structure alternatives relied on industry standards and cost-of-service principles, and are compliant with Proposition 218. The rate alternative that will ultimately be implemented is the decision of the Board. The fixed and volume-based charges were calculated based on the net revenue requirements, number of customer accounts, water consumption, and other relevant data provided by the Authority.

The following are the basic components included in this analysis:

Developing Cost Allocations – The water revenue requirements were “functionalized” into three categories: (1) commodity (or volume-based) costs; (2) fixed capacity costs; and (3) customer service costs. These functionalized costs were then used to develop unit costs based on various factors, such as water consumption, peaking factors, and number of accounts by meter size.

Determining Revenue Requirements by Customer Class – The total revenue that needs to be collected from each customer class was determined using the functional costs and allocation factors. For example, customer costs are allocated based on the number of meters, while volume-related costs are allocated based on the water consumption of each customer class. Once the costs are allocated and the net revenue requirement for each customer class is determined, collecting the revenue requirements from each customer class is addressed within the rate design.

Evaluating Rate Design (Fixed vs. Variable Charges) – The revenue requirements for each customer class are collected through a combination of fixed monthly service charges and volumetric rates. Based on direction received from Authority staff and the Board, the proposed rate structure will “phase in” an increased percentage of rate revenue collected from fixed charges over the course of the three-year adopted rate period. The proposed rates will collect 13% of rate revenue from fixed charges in FY 2023/24, 16% of rate revenue from fixed charges in FY 2024/25 and 19% of rate revenue from fixed charges in FY 2025/26.

2.2 Financial Plan

It is important for municipal utilities to not only collect sufficient revenues every year, but to also maintain reasonable reserves to handle emergencies, fund working capital, maintain a good credit rating, and generally follow sound financial management practices. Rate adjustments are governed by the need to meet operating and capital costs as well as maintain reasonable reserve levels. The current state of the Authority's water utility, regarding these objectives, is as follows:

Meeting Net Revenue Requirements: For FY 2023/24 through FY 2025/26, the projected net revenue requirement (that is, total annual expenses plus debt service and rate-funded capital costs, less non-rate revenues) for the water system averages \$57.2 million annually. If no rate adjustments are implemented, the Authority is projected to run an annual deficit of approximately \$3.5 million in FY 2023/24, increasing to more than \$5.3 million by FY 2025/26, and will be unable to meet its debt service coverage requirements. Additional detail on the Financial Plan and Summary of Revenue Requirements is found in Table 1 of the *Appendix*.

Maintaining Reserve Funds: Reserve funds provide a basis for a utility to cope with fiscal emergencies, such as revenue shortfalls, asset failure, and natural disasters, among other events. Reserve policies provide guidelines for sound financial management, with an overall long-range perspective to maintain financial solvency and mitigate financial risks associated with revenue instability, volatile capital costs, and unexpected emergencies. Additional detail on the Reserve Fund is found in Tables 2 and 3 of the *Appendix*.

- The Authority's existing reserves are healthy, and the challenge is to meet future revenue requirements and still maintain adequate reserves. NBS together with Authority staff have chosen to set the following reserve targets:
 - Operating Reserve equal to two months of operating and maintenance expenses, or approximately \$8.8 million in FY 2023/24. An operating reserve is intended to promote financial viability in the event of any short-term fluctuation in revenues and/or expenditures, such as those caused by weather patterns, the natural inflow and outflow of cash during billing cycles, natural variability in demand-based revenue streams (e.g., volumetric charges), and – particularly in periods of economic distress – changes or trends in the age of receivables.
 - Capital & Infrastructure Reserve equal to 103% of the total Board Designated Reserves. The Board Designated Reserves for Vista del Lago, Vehicle Replacement, Sweetwater River Basin land, Sweetwater Dam PMF Project, and the National Authority Wells Water Quality Improvement Project total approximately \$7.8 million in FY 2022/23.
 - Revenue Stabilization Reserve equal to 1 month of rate revenue, or approximately \$4.4 million in FY 2023/24. The rate stabilization reserve is used to offset future water rate increases due to water purchases from the San Diego County Water Authority (SDCWA). The maximum Rate Stabilization Reserve balance (Maximum Balance) is established with each annual budget and is equal to the volume of M&I wholesale water purchases required for a 24 month period when no surface reservoir water is available multiplied by the most current SDCWA Melded Untreated M&I Supply Rate and Transportation Rate, rounded to the nearest one-hundred thousand.

Funding Capital Improvement Projects: The Authority must fund necessary capital improvements to maintain current service levels. Authority staff has identified roughly \$45.5 million in expected capital expenditures over the three years (FY 2023/24 through FY 2025/26) which is an average of approximately \$15 million in capital expenditures annually. This rate study assumes the Authority will not be issuing any new revenue bonds in FY 2023/24 through FY 2025/26. The recommended rate increases enable the Authority to fund these capital expenditures without exhausting the existing reserves levels below the minimum target ending balances.

Inflation and Growth Projections: Cost inflation and growth assumptions are necessary to project future revenues and expenses for the study period. Customer growth is expected to be approximately 0.32% annually. This factor was used in the analysis for rate revenues while inflation factors, including the Consumer Price Index,¹³ were used in projecting expenses.

Maintaining Adequate Bond Coverage: The water utility currently has an annual debt payment of approximately \$1.3 million for the 2017 Water Revenue Bonds. This analysis assumes that the Authority will not be issuing any new debt to fund capital projects during the proposed rate period. However, whether new debt will be needed will depend on the actual delivery of capital projects (i.e., the timing and costs). The rate covenants of the new revenue bonds typically include a minimum debt service coverage ratio of 1.25. The benefit of maintaining a higher coverage ratio is that it strengthens the Authority's credit rating which can help lower interest rates for debt-funded capital projects and, in turn, reduce annual debt service payments.

Figure 2 summarizes the sources and uses of funds, net revenue requirements, and the annual percent adjustments in total rate revenue recommended for the next three years.

Debt Service	1,343,131	1,342,631	1,345,881	1,347,631
Rate-Funded Capital Expenses	1,511,179	4,601,261	2,071,623	2,083,862
Total Use of Funds	\$ 58,187,710	\$ 58,701,692	\$ 58,566,225	\$ 61,108,988
Annual Surplus/(Deficit)	\$ (2,526,510)	\$ (3,454,707)	\$ (3,143,331)	\$ (5,348,015)
Additional Revenue from Rate Increases ¹	-	265,050	1,869,234	5,346,156
Surplus (Deficiency) after Rate Increase	\$ (2,526,510)	\$ (3,189,657)	\$ (1,274,097)	\$ (1,858)
Projected Annual Rate Revenue Increase	0.00%	0.50%	6.00%	6.50%
Cumulative Rate Revenue Increases	0.00%	0.50%	6.53%	13.45%
Net Revenue Requirement²	\$ 55,367,710	\$ 56,464,692	\$ 56,322,102	\$ 58,851,176

1. Assumes new rates are implemented January 1, 2024.

2. Total use of funds less non-rate revenues.

Figure 3 summarizes the projected reserve fund balances and reserve targets for the Authority's unrestricted funds. A detailed version of the proposed 3-year financial plan is included in the *Appendix*. The tables in the *Appendix* include the revenue requirement (Table 1), reserve funds (Tables 2-3), revenue sources (Tables 4-5), operating expenses (Tables 6-15), capital improvement costs (Tables 16-23), debt obligations (Tables 24-25) and the proposed rate adjustments needed to meet the Authority's funding requirements (Table 1).

Figure 3. Summary of Primary Water Reserve Funds

Beginning Reserve Fund Balances and Recommended Reserve Targets	Budget	3-Year Projected Rate Period		
	FY 2022/23	FY 2023/24	FY 2024/25	FY 2025/26
Operating Reserve				
Ending Balance	\$ 9,222,000	\$ 6,032,343	\$ 4,758,246	\$ 4,756,387
<i>Recommended Minimum Target</i>	<i>9,222,000</i>	<i>8,793,000</i>	<i>9,191,000</i>	<i>9,613,000</i>
Board Designated Reserves				
Ending Balance	\$ 8,651,353	\$ 9,115,404	\$ 9,800,522	\$ 10,923,157
<i>Recommended Minimum Target</i>	<i>8,057,105</i>	<i>8,298,818</i>	<i>8,547,783</i>	<i>8,804,216</i>
Revenue Stabilization Reserve				
Ending Balance	\$ 13,216,231	\$ 13,386,588	\$ 13,559,142	\$ 13,733,919
<i>Recommended Minimum Target</i>	<i>4,400,000</i>	<i>4,440,000</i>	<i>4,590,000</i>	<i>4,900,000</i>
Total Ending Balance	\$ 31,089,584	\$ 28,534,335	\$ 28,117,910	\$ 29,413,463
Total Recommended Minimum Target	\$ 21,679,105	\$ 21,531,818	\$ 22,328,783	\$ 23,317,216

2.3 Cost-of-Service Analysis

Once the net revenue requirements are determined, the cost-of-service analysis (COSA) proportionately distributes the revenue requirements to each of the customer classes. The COSA consists of two major components: (1) the classification of expenses, and (2) the allocation of costs to each customer class. Costs are classified according to the function they serve. All costs in the Authority's budget are allocated to each component of the rate structure in proportion to the level of service required by customers.

The level of service is related to the volume and strength of the water treated, infrastructure capacity, and customer service. These costs are based on allocation factors, such as water consumption, number of meters, and customer class. Ultimately, a COSA is intended to result in rates that are proportional to the cost of providing service to each customer class.

FUNCTIONALIZATION AND CLASSIFICATION OF COSTS

Most costs are not typically allocated just to fixed or variable categories but rather allocated to multiple functions of water service. The functionalization and classification process provides the basis for allocating costs to various customer classes based on the cost causation (classification) components described below:

- **Commodity-related costs** are costs associated with the change in the volume of water produced and delivered. These commonly include the costs of water quality testing, energy related to pumping for transmission and distribution, and source of supply.
- **Capacity-related costs** are costs associated with sizing facilities to meet the maximum, or peak, demand. This includes both operating costs and capital infrastructure costs incurred to accommodate peak system capacity events.
- **Customer-related costs** are costs associated with having a customer connected to the water system, such as meter reading, postage, billing, and other administrative duties.

The Authority's budgeted costs were reviewed and allocated to these cost causation components which are used as the basis for establishing new water rates and translated into fixed and variable charges. Tables in the *Appendix* (Tables 27-40) show how the Authority's expenses were classified and allocated to these cost causation components. In the analysis, these cost causation components are also considered to be either fixed or variable.

FIXED AND VARIABLE COSTS

Ideally, utilities should recover all of their fixed costs from fixed charges and all of their variable costs from volumetric charges. When this is the case, fluctuations in water sales revenues would be directly offset by reductions or increases in variable expenses, which provides greater revenue stability for the utility. However, other factors are often considered when designing water rates, such as community values, water conservation goals, ease of understanding, and ease of administration.¹⁴

NBS functionalized the Authority's costs into categories that represent fixed and variable costs. This analysis resulted in a cost distribution that is approximately 51% fixed and 49% variable (i.e., volumetric). However, the Authority's current rates collect revenue from customers in proportions of approximately 13% fixed and

¹⁴ *Principles of Water Rates, Fees, and Charges*, Manual of Water Supply Practices, Manual M1, AWWA, 7th Edition, 2017, pp. 6 and 96.

87% variable. Authority staff and the Board have provided direction to design a rate structure to increase the cost distribution for fixed charges to be more representative of the cost-of-service analysis. As such, the proposed rate structure will “phase in” an increased percentage of rate revenue collected from fixed charges over the course of the three-year adopted rate period. The proposed rates will collect 13% of rate revenue from fixed charges in FY 2023/24, 16% of rate revenue from fixed charges in FY 2024/25 and 19% of rate revenue from fixed charges in FY 2025/26.

Figure 4 summarizes how costs are allocated to each cost component and used to establish new water rates. **Figure 5** shows the resulting cost allocation to each cost classification component for FY 2023/24. Additional detailed information regarding functionalization and classification of costs is found in Tables 53-87 in the *Appendix*.

Figure 4. Allocation Percentages of Revenue Requirements

Classification Components	YEAR 1 (13% Fixed / 87% Variable) Net Rev. Reqts. (FY 2023/24)		YEAR 2 (16% Fixed / 84% Variable) Net Rev. Reqts. (FY 2024/25) ²		YEAR 3 (19% Fixed / 81% Variable) Net Rev. Reqts. (FY 2025/26) ²	
Commodity-Related Costs	\$ 42,692,081	80.1%	\$ 43,559,460	77.1%	\$ 44,586,559	74.1%
SDCWA Wholesale Purchased Water	3,657,200	6.9%	3,876,632	6.9%	4,128,613	6.9%
Subtotal - Commodity-Related Costs	46,349,281	87.0%	47,436,092	84.0%	48,715,172	81.0%
Capacity-Related Costs	3,504,602	6.6%	5,111,950	9.1%	6,932,109	11.5%
SDCWA Infrastructure Access Charge	2,206,700	4.1%	2,339,102	4.1%	2,491,144	4.1%
Customer-Related Costs	1,207,800	2.3%	1,575,714	2.8%	1,992,786	3.3%
Fire Protection-Related Costs	6,653	0.0%	8,680	0.0%	10,977	0.0%
Net Revenue Requirement	\$ 53,275,036	100.0%	\$ 56,471,538	100.0%	\$ 60,142,188	100.0%
Net Revenue Requirement w/o SDCWA Charges	\$ 47,411,136	--	\$ 50,255,804	--	\$ 53,522,431	--

1. Net revenue requirements less recycled water revenue requirements.

2. Net Rev. Reqts. in Years 2-3 assume costs increase uniformly by the annual rate increases in the Financial Plan.

2.4 Characteristics of Water Customers by Customer Class

Customer classes are typically determined by grouping customers with similar demand characteristics into categories that reflect the cost differentials to serve each type of customer. Customer classes are most often identified as single-family, multi-family, commercial, landscape, etc., and the Authority follows this common methodology. The rates proposed in this report follow a similar structure where the fixed charges

within each customer class vary by meter size while all customers are charged a volumetric rate based on the amount of consumption.

The amount of consumption, the peaking factors, and the number of meters by size are used to allocate costs to customer classes and determine the appropriate rate structures for each. These components of the COSA are presented in the following figures.

In terms of variable cost allocation, commodity-related (volumetric) costs are costs associated with the total annual consumption of water by customer class. **Figure 6** below summarizes the most recent consumption data by customer class and represents the expected percent of consumption over the 3-year rate period. A conservation factor of 5% is utilized to account for permanent adjustments to water usage by the Authority's ratepayers over the course of the rate implementation period and is estimated based on the Authority's historical trends of decreasing annual average water consumption per resident.

Figure 6. Water Consumption by Customer Class

Development of the Volumetric/Variable Allocation Factor ¹				
Customer Class	FY 2021/22 Consumption (hcf)	% Adjustment for Conservation ²	Est. FY 2020/21 Volume Adjusted for Conservation	FY 2021/22 % of Total Volume
Residential	2,851,451	5.0%	2,708,878	38.3%
Multi-Family	2,379,851	5.0%	2,260,858	31.9%
Commercial	1,313,754	5.0%	1,248,066	17.6%
Public Agencies	304,266	5.0%	289,053	4.1%
Irrigation	582,953	5.0%	553,805	7.83%
Other-Construction	10,624	5.0%	10,093	0.1%
Industrial	6,412	5.0%	6,091	0.1%
Fire Protection	525	5.0%	499	0.01%
Total	7,449,836		7,077,344	100%

1. Consumption data is based on SWA billing data.

2. A conservation factor of 5% is used.

Two components comprise the cost allocation to the fixed charges: (1) the capacity component, and (2) the customer component. In terms of peak capacity, the Authority must size its infrastructure to accommodate the highest levels of demand. This means that various public facilities and assets (such as reservoirs, storage tanks, pumping systems) are built larger or with greater capacity than would otherwise be needed by average or lower-than-average water use. Public agencies regularly look at peaking factors as a means of allocating the share of such facilities in proportion to the demand that various users place on the water system. A "peaking factor" is the relationship between the average use by meter size to its peak use. Peak water use is typically expressed as a ratio, or "peaking factor", by dividing the peak water use by the average bimonthly water use. Error! Not a valid bookmark self-reference. shows the peaking factor ratios for each customer class, which illustrates the peak bimonthly demand by each customer class compared to the average bimonthly use.

Figure 7. Peaking Factors by Customer Class

Development of the PEAK CAPACITY (MAX MONTH) Allocation Factors				
Customer Class	Average Bimonthly Use (hcf)	Avg. Bi-Mo. Peak Use (hcf) ¹	Peak Bimonthly Factor	Max Month Capacity Factor
Residential	225,740	298,431	1.32	37.0%
Multi-Family	188,405	265,058	1.41	32.8%
Commercial	104,006	137,434	1.32	17.0%
Public Agencies	24,088	41,243	1.71	5.1%
Irrigation	46,150	63,066	1.37	7.81%
Other-Construction	841	1,014	1.21	0.1%
Temporary Hydrant Meters	508	1,024	2.02	0.1%
Fire Protection	42	63	1.52	0.01%
Total	589,779	807,332	1.37	100%

1. Based on peak monthly data (highest 2-month average due to bi-monthly meter reading).

Both operating costs and capital infrastructure costs incurred to accommodate peak system capacity events are generally allocated to each meter size according to its contribution to peak capacity events (Tables 58-73 in the *Appendix*). The peaking factors by customer class summarized in Figure 7 above are then used to allocate the capacity-related (fixed) costs to each customer class as summarized in Tables 55, 62 and 68 of the *Appendix*. Additional detail regarding the calculation of the fixed charge component by meter size is found in Section 2.5 of the report below.

Figure 8 shows the number of meters for each customer class. The percentage of total customers by customer class is then used to develop the customer allocation factors to allocate customer costs. Customer costs are those costs associated with having customers connected to the water system and include costs related to meter reading, postage, and billing. Capacity costs and customer costs comprise the component of the fixed meter charges.

Figure 8. Number of Meters by Customer Class

Development of the Customer Allocation Factor		
Customer Class	No. of Meters	Percent of Total
Residential	28,269	77.7%
Multi-Family	3,775	10.4%
Commercial	3,061	8.4%
Public Agencies	310	0.9%
Irrigation	781	2.1%
Other-Construction	75	0.2%
Temporary Hydrant Meters	33	0.1%
Fire Protection	92	0.3%
Total	36,396	100.0%

1. Meter count data is based on the City's billing data for June 2022.

2.5 Rate Design Analysis

Evaluating the water rate structure includes reviewing rate-design objectives and policies, including continuity of rate design, revenue stability, equity among customers, and water conservation. NBS

discussed a variety of alternative fixed versus variable rate designs with Authority staff and the Board over the course of this study. Ultimately, Authority staff and the Board have provided direction to design a rate structure to increase the cost distribution for fixed charges to be more representative of the cost-of-service analysis. As such, the proposed rate structure will “phase in” an increased percentage of rate revenue collected from fixed charges over the course of the three-year adopted rate period. The proposed rates will collect 13% of rate revenue from fixed charges in FY 2023/24, 16% of rate revenue from fixed charges in FY 2024/25 and 19% of rate revenue from fixed charges in FY 2025/26. The preferred rate structure proposes a tiered volumetric rate for residential customers based on the Authority’s four sources of supply, and a uniform volumetric rate for all other customer classes. The following sections describe how the proposed water rates were determined.

DEVELOPMENT OF PROPOSED RATES

Fixed Service Charges

The fixed meter charge recognizes that the water utility incurs fixed costs regardless of whether customers use water. Two components comprise the fixed meter charge: (1) the capacity component, and (2) the customer component. The capacity component recovers costs associated with sizing the water system to ensure there is sufficient capacity in the system to meet peak demand. A user class with higher-peaking ratio is allocated a proportionately higher share of the capacity-related costs compared to customer classes with lower peaking ratios. The customer component includes those costs related to reading and maintaining meters, customer billing and collection, and other customer service-related costs.

Fixed charges also vary based on meter sizes because larger meters have higher capacity requirements and reflect their potential to use more of the system’s capacity.¹⁵ The potential capacity demands (peaking) is proportional to the maximum hydraulic flow through each meter size based on the hydraulic capacity ratios established by AWWA.¹⁶ The AWWA capacity ratios used for this report are shown in **Figure 9**.

Figure 9. Hydraulic Capacity Factors

Meter Size	Standard Meters	
	Meter Capacity (gpm) ¹	Equivalency to 1-inch
<i><u>Displacement Meters</u></i>		
3/4 inch	30	1.00
1 inch	50	1.67
1 1/2 inch	100	3.33
2 inch	160	5.33
<i><u>Compound Class I Meters</u></i>		
3 inch	320	10.67
4 inch	500	16.67
6 inch	1,000	33.33
8 inch	1,600	53.33
<i><u>Turbine Class II Meters</u></i>		
10 inch	4,200	140.00
1. Per AWWA M-1, Table B-1.		

¹⁵ System capacity is the system’s ability to supply water to all delivery points at the time when demanded.

¹⁶ *Principles of Water Rates, Fees and Charges*, Manual of Water Supply Practices, Manual M1, AWWA, 7th Edition, 2017, p. 386. *Water Meters – Selection, Installation, Testing and Maintenance*, Manual M6, AWWA, 5th Edition, 2012, pp. 63-65.

The actual number of meters by size is multiplied by the corresponding capacity ratios to calculate “equivalent” meters. The number of equivalent meters is used as a proxy for the potential demand that each customer can place on the water system. **Figure 10** summarizes the number of meters by customer class and meter size.

Figure 10. Number of Meters by Class and Size

Figure 11 shows the calculation of the fixed bimonthly service Sweetwater Authority charges for all customer classes based on meter size using the costs allocated to each customer class from **Figure 5**. As previously mentioned, the customer service charge is calculated by dividing the customer service-related costs by the total number of meters, whereas the fixed capacity charge is calculated by dividing the capacity-related costs by the total number of equivalent meters for each meter size.

Figure 11. Calculation of Fixed Service Charges

1. Meter by Class and Size are based on June 2022 customer billing data.

2. Source: *Principles of Water Rates, Fees, and Charges*, Manual M1, AWWA, Table B-1.

3. Customer costs are allocated to each customer by dividing the total customer costs by the total number of customers.

4. Capacity costs are allocated by meter size and the hydraulic capacity of the meter.

Fixed Service Charges (Irrigation Meters)

The same methodology described above was also used to calculate fixed charges for irrigation meters. Two components comprise the fixed meter charge: (1) the capacity component, and (2) the customer component. The capacity component recovers costs associated with sizing the water system to ensure there is sufficient capacity in the system to meet peak demand. A user class with higher-peaking ratio is allocated a proportionately higher share of the capacity-related costs compared to customer classes with lower peaking ratios. As such, the fixed charges for the irrigation meters reflect the higher share of capacity-

related costs compared to other customer classes. The customer component includes those costs related to reading and maintaining meters, customer billing and collection, and other customer service-related costs. Further detail on the cost-of-service analysis for the fixed service charges for irrigation meters is found in Table 58 of the *Appendix*. As shown in the table, bimonthly fixed charges for irrigation meters are based on the calculated customer and capacity costs allocated to irrigation divided by the total number of customers for each irrigation meter size.

Fixed Service Charges (Fire Service Meters)

Fire service customers differ from other water service customers because their service is more of a standby nature, where a readiness-to-serve charge is more appropriate. Except in the event of a fire, these users do not intend to use water on a regular basis. The service provided to fire service customers is readiness to deliver relatively large quantities of water for short periods of time at any of the large number of points in the water distribution system; however, the total annual quantity of water delivered is relatively small. While the Authority still needs to provide sufficient capacity for fire meters and recover other operating and maintenance costs, the overall cost to serve these users is less than that of a standard service; therefore, the fixed charges are less. Further detail on the cost-of-service analysis for the fixed service charges for fire service meters is found in Table 60 the *Appendix*. As shown in the table, bimonthly fixed charges for fire meters are based on the calculated customer and capacity costs allocated to fire protection divided by the total number of customers for each fire meter size.

Volumetric Rates

Currently, the Authority uses a tiered rate structure for all non-single family residential customers; however, the proposed rates are based on a uniform, or single tier, volumetric rate for all non-single family residential customers. This is because, based on review of Authority-specific customer usage information and demand patterns (consumption by customer class is summarized Table 42 of the *Appendix*), single family residential customers consist of a single dwelling unit and show common consumption patterns in terms of total volume consumed, while other customer classes do not exhibit homogenous characteristics in terms of consumption patterns either within the specific customer class itself or across the various non-single family customer classes. For example, the multi-family residential customer class contains 114 times more meters and annually consumes over 370 times more water annually than the industrial customer class. As such, NBS recommends a uniform volumetric rate for non-single family residential customers to account for the lack of shared volumetric consumption pattern characteristics amongst the various customer classes.

Figure 12 shows the calculation of the uniform commodity rate per unit of water for all non-single family residential customers, including the basic commodity rate (without SDCWA pass-through costs) and the commodity rate including SDCWA wholesale water purchase charges (including SDCWA pass-through costs).

Figure 12. Uniform Commodity Rates for FY 2023/24

(13% Fixed / 87% Variable)									
Customer Classes	Number of Meters ¹	Water Consumption (hcf/yr) ²	Source of Supply Costs	Other Volumetric Costs	Target SWA Vol. Rev. Req't ³	Uniform SWA Commodity Rates ³ (\$/hcf)	SDCWA Wholesale Water Purchase	Uniform SDCWA Commodity Rates (\$/hcf)	% of Total Commodity Rate Revenue

1. Consumption data is based on the SWA billing data.

2. Water consumption is actual consumption for FY 2021/22 and includes an adjustment of 5% for conservation. See Table 30.

3. Excluding SDCWA Wholesale Water Purchase costs.

Residential Tiered Rates

Currently, the Authority uses a 4-tier rate structure for all single-family residential customers. The proposed residential tiered rate structure collects the target volumetric rate revenue required from the cost-of-service analysis (summarized in **Figure 12** above) by allocating costs to a tiered rate structure that reflects the Authority's cost of providing water service to single-family residential customers consuming water at each tier based directly on the source of supply commodity costs specific to each source.

As shown in **Figure 13** below, the proposed residential tiered rates were calculated directly based on the source of supply commodity costs for the four Authority water supplies, as provided in the Authority's adopted budget for Fiscal Year 2023/24. As summarized in the Figure below, the Authority's four sources of supply are National City (NC) Wells, Reservoir Water, Groundwater Desalination (Desal), and San Diego County Water Authority (SDCWA) purchased water. Tier breakpoints were directly calculated based on the percentage of single-family residential customers at the respective volumetric consumption levels, as summarized in **Figure 14**. Additional detail demonstrating the calculation of the direct cost basis for the residential tiered rates based on the four sources of supply is found in Tables 45-52 the *Appendix*.

Figure 13. Water Supplies and Costs

Source of Supply	Total Supplies		Cost (\$/AF) ²	Supply Costs ³ (FY 2023/24)	
	In AF/Year	% of Total		(\$)	% of Total
Tier 1

1. Total Contracted Supply Purchase Costs are from the *Source of Supply* tab, Table 33.
2. Residential consumption for FY 2021/22 is from the *Allocation Factors* tab, Table 30.
3. Contracted Supply Costs are from the *Source of Supply* tab, Table 34.

2.6 Proposed Water Rates

The Authority's previous rate study was completed five years ago in 2018. Since then, the underlying cost factors (e.g., consumption by class, number of meters, peaking factors) have changed. The cost-of-service analysis by nature "re-balances" how costs are allocated between customer classes and, as a result, there are uneven adjustments in the first year of the 3-year rate adoption period. In contrast, in the subsequent two years of the rate planning period, proposed charges are simply adjusted by the proposed adjustment in total rate revenue needed to meet projected revenue requirements.

The Authority currently implements one fixed pass-through charge: 1) SDCWA Infrastructure Access Charge. The Authority also currently implements five volumetric pass-through charges: 1) SDCWA Customer Service Charge, 2) SDCWA Emergency Storage Charge, 3) SDCWA Supply Reliability Charge, 4) MWD Readiness to Serve Charge, and 5) MWD Capacity Charge. The Authority will continue to update these charges each January 1st. Pass-through charges will be based on the wholesale costs set by SDCWA and MWD, respectively.

Figure 16 provides a comparison of the current and proposed water rates for FY 2023/24 through 2025/26 for each customer class and meter size. Projected rates for each fiscal year¹⁷ reflect adjustments based on the cost-of-service analysis, “phase-in” approach for the fixed/variable rate design structure, and the recommended percent increases in rate revenue planned for each year. More detailed tables on the development of the proposed water rates are documented in Tables 53-87 in the *Appendix*.

Figure 16. Current and Proposed Water Rates

Water Rate Schedule	Current Rates	Proposed Rates (with 3-Year Phase-In)		
		FY 2023/24	FY 2024/25	FY 2025/26
<i>Projected Increase in Rate Revenue per Financial Plan:</i>		0.50%	6.00%	6.50%
Bi-Monthly Fixed Service Charges (in \$/2-mo)		13% F/87% V	16% F/84% V	19% F/81% V
Sweetwater Authority Rates for Bi-Monthly Fixed Charge

2.7 Comparison of Current and Proposed Water Bills

Figure 17 and **Figure 18** compare a range of bimonthly water bills under the current and proposed water rates for residential and commercial customers. These bimonthly bills are based on typical meter sizes and highlight the average consumption levels for each customer. The attached *Appendix* (“Charts and Tables”) provides additional detailed information on the comparison of current and proposed bimonthly bills for various customer classes.

These bill comparisons assume that financial plan projections remain accurate. However, some costs that are outside of the Authority’s control could change, such as the cost of water purchased from SDCWA. There is a “pass-through” provision that allows the Authority to make adjustments to water rates if these types of costs exceed those in the Authority’s projections.

Figure 17. Bimonthly Water Bill Comparison for Residential Customers

Figure 18. Bimonthly Water Bill Comparison for Commercial Customers

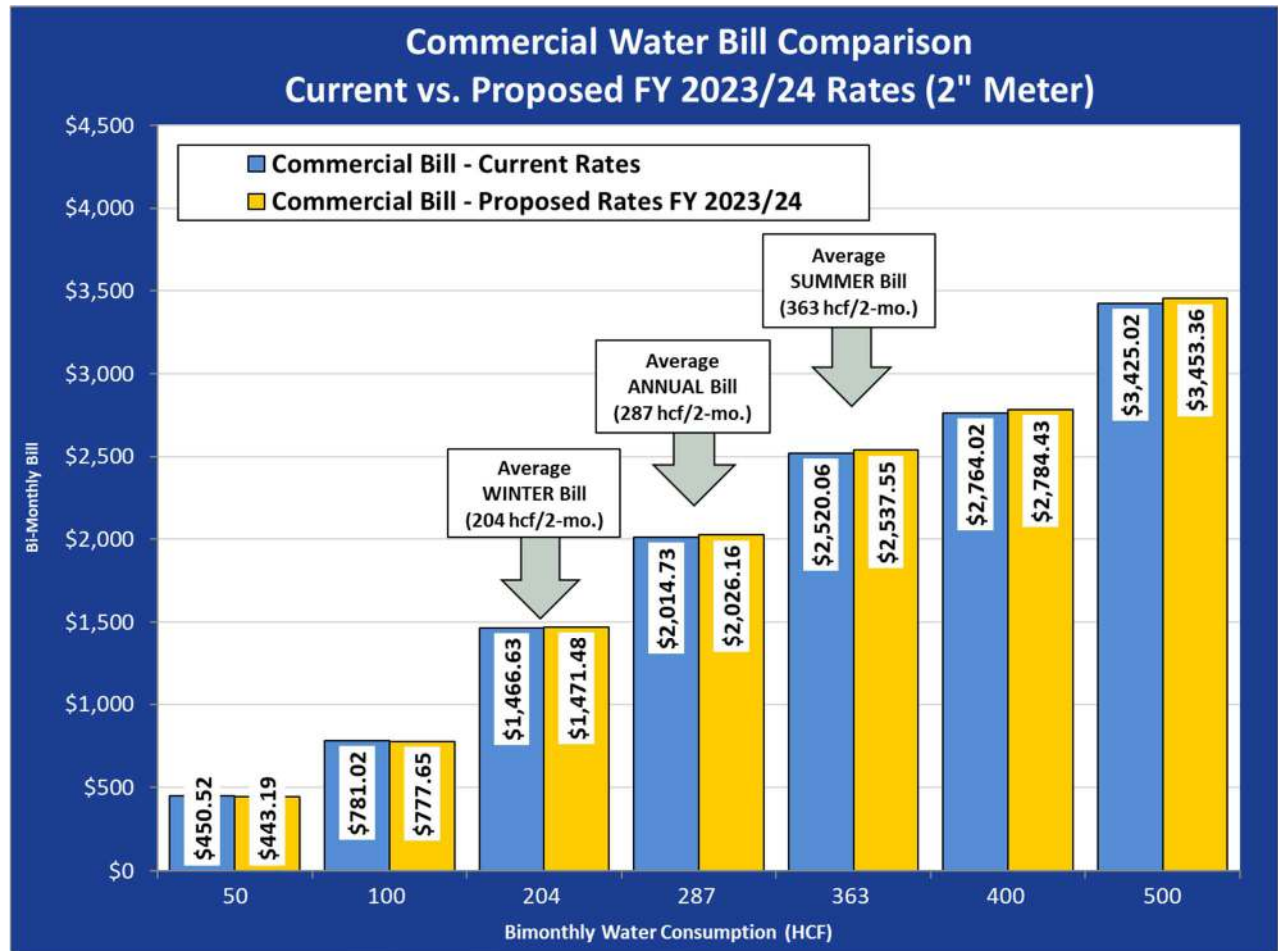

Figure 19 and Figure 20 compare the single-family water bills for the three-year rate adoption period assuming average consumption levels of bimonthly water use of 16 HCF and 24 HCF, respectively.

Figure 19. Residential Water Bills – 3-Years

Figure 20. Residential Water Bills – 3-Years

3. Recommendations and Next Steps

3.1 Consultant Recommendations

NBS recommends the Authority take the following actions:

- **Approve and Accept this Study:** NBS recommends the Board formally approve, receive and file this Study and its recommendations and proceed with the next steps outlined below to implement the proposed rates. This will provide documentation of the rate study analyses and the basis for analyzing potential changes to future rates.
- **Implement Recommended Levels of Rate Increases and Proposed Rates:** Based on successfully meeting the Prop 218 procedural requirements, the Authority should proceed with implementing the 3-year schedule of proposed rates and rate increases previously shown in Figure 16. This will help ensure the continued financial health of Authority's water utility.

3.2 Next steps

Annually Review Rates and Revenue – Any time an agency adopts new utility rates or rate structures, those new rates should be closely monitored over the next several years to ensure the revenue generated is sufficient to meet the annual revenue requirements. Changing economic and water consumption patterns underscore the need for this review, as well as potential and unseen changing revenue requirements — particularly those related to environmental regulations that can significantly affect capital improvements and repair and replacement costs.

Note: The attached Appendix provides more detailed information on the analysis of the financial plan, revenue requirements, cost-of-service, and the rate design analyses that have been summarized in this report.

3.3 NBS' Principal Assumptions and Considerations

In preparing this report and the opinions and recommendations included herein, NBS has relied on several principal assumptions and considerations regarding financial matters, conditions, and events that may occur in the future. This information and these assumptions, including the Authority's budgets, capital improvement costs, customer accounts and consumption, and information from Authority staff were provided by sources we believe to be reliable, although NBS has not independently verified this data.

While we believe NBS' use of such information and assumptions is reasonable for the purpose of this report and its recommendations, some assumptions will invariably not materialize as stated herein and may vary significantly due to unanticipated events and circumstances. Therefore, the actual results can be expected to vary from those projected to the extent that actual future conditions differ from those assumed by us or provided to us by others.

Electricity ⁷	5	--	3.66%	5.64%	5.64%
Fuel & Utilities ⁸	6	--	4.68%	5.24%	5.24%
Construction Cost Inflation ⁹	7	--	3.50%	3.50%	3.50%
Water Purchases ¹⁰	8	--	13.00%	5.00%	5.00%
No Escalation	9	--	0.00%	0.00%	0.00%

1. Revenues and expenses for FY 2022/23 and FY 2023/24 provided by the Authority. Revenues and expenses for all other years are escalated based on the forecasting assumptions in Table 15. Source files: *Expense - Capital Budget FY24 & Fiveyear Financial FY24*.

2. Expenses are inflated each year by the following annual inflation factor categories.

3. Customer growth is based on service area population growth through FY 2039/40. Source files:

2015 Urban Water Management Plan.pdf, Page 22, & Customer Growth Rate_nbs.xlsx

4. General cost inflation is based on the 5-year average annual change in the Consumer Price Index for all Urban Consumers in the San Diego-Carlsbad, CA area.

5. Labor cost inflation is based on the 5-year average annual change in the Quarterly Census of Employment and Wages for San Diego-Carlsbad, CA.

6. Energy cost inflation is based on the 5-year average annual change in the Consumer Price Index for all Urban Consumers in the San Diego-Carlsbad, CA area.

7. Electricity cost inflation is based on the 5-year average change in the Consumer Price Index for San Diego-Carlsbad, CA area.

8. Fuel & Utilities cost inflation is based on the 5-year average annual change in the Consumer Price Index - Average Price Data for Fuels and related products and power. This factor is used for utility costs other than electricity.

9. Construction cost inflation is the 10-year average change in the Construction Cost Index for 2012-2022.

Source: *Engineering News Record website (http://enr.construction.com)*.

10. Water purchases growth is estimated at 5% annually based on historical data. Source file: *14 Current and 5 prior years of Source of Supply*.

TABLE 24 : EXISTING DEBT OBLIGATIONS

EXISTING DEBT OBLIGATIONS	Budget	3-Year Projected Rate Period		
	FY 2022/23	FY 2023/24	FY 2024/25	FY 2025/26
Annual Repayment Schedules:				
2017 Water Revenue Bonds - Debt Amount \$21,830,000 ¹				
Principal Payment	\$ 510,000	\$ 535,000	\$ 565,000	\$ 595,000
Interest Payment	833,131	807,631	780,881	752,631
Subtotal: Annual Debt Service	\$ 1,343,131	\$ 1,342,631	\$ 1,345,881	\$ 1,347,631
Coverage Requirement (\$-Amtnt above annual payment) ²	\$ 1,678,914	\$ 1,678,289	\$ 1,682,352	\$ 1,684,539
Reserve Requirement (total fund balance) ³	\$ -	\$ -	\$ -	\$ -
Grand Total: Existing Annual Debt Service	\$ 1,343,131	\$ 1,342,631	\$ 1,345,881	\$ 1,347,631
Grand Total: Existing Annual Coverage Requirement	\$ 1,678,914	\$ 1,678,289	\$ 1,682,352	\$ 1,684,539
Grand Total: Existing Debt Reserve Target	\$ -	\$ -	\$ -	\$ -

1. Water Revenue Bonds Series 2017A issued in the name of Cede & Co, as nominee of The Depository Trust Company, New York, New York.

Source: 6 Repayment Schedule 2017 Bond payments & 7a CASweetwaterAuth01a-FINAL 2017 Bond OS.pdf.

2. The debt service coverage ratio requirement is 1.25 (See page 8).

3. The 2017 Revenue Bonds do not require that the Authority maintain a reserve fund (See page 8).

TABLE 25 : EXISTING ANNUAL DEBT OBLIGATIONS TO BE SATISFIED BY WATER RATES

Annual Obligations	FY 2022/23	FY 2023/24	FY 2024/25	FY 2025/26
Existing Annual Debt Service	\$ 1,343,131	\$ 1,342,631	\$ 1,345,881	\$ 1,347,631
Existing Annual Coverage Requirement	\$ 1,678,914	\$ 1,678,289	\$ 1,682,352	\$ 1,684,539
Existing Debt Reserve Target	\$ -	\$ -	\$ -	\$ -

TABLE 26 : WATER RATE SCHEDULE (Current Rates Jan. 1, 2023)

Commodity Charges		
Single-Family Residential Rates	Variable Rate for Bi-Monthly Sweetwater Authority Charge	Variable Rate for Bi-Monthly SDCWA Wholesale Water Purchase Charge
<i>Tiers by Units of Water Served</i>	<i>\$/HCF²</i>	<i>\$/HCF²</i>
0 through 10 HCF	\$4.31	\$0.54
11 through 16 HCF	\$5.14	\$0.65
17 through 27 HCF	\$5.29	\$0.66
28 and above HCF	\$6.37	\$0.80
Other Commodity Charges	Uniform Rate for Bi-Monthly Sweetwater Authority Charge	Uniform Rate for Bi-Monthly SDCWA Wholesale Water Purchase Charge
<i>Customer Class</i>	<i>\$/HCF²</i>	<i>\$/HCF²</i>
Multi-family Residential	\$5.92	\$0.74
Commercial	\$5.66	\$0.71
Public Agencies	\$6.99	\$0.87
Construction	\$8.54	\$1.07

Meter Charge & SDCWA Infrastructure Access Charge		
Meter Size	Sweetwater Authority Rates for Bi-Monthly Fixed Charge	SDCWA Rates for Bi-Monthly Infrastructure Access Charge
5/8 inches	\$21.70	\$9.16
1 inch	\$32.30	\$14.66
1-1/2 inches	\$51.18	\$27.48
2 inches	\$72.40	\$47.62
3 inches	\$137.90	\$87.94
4 inches	\$232.76	\$150.22
6 inches	\$468.52	\$274.80
8 inches	\$772.48	\$476.32
10 inches	\$1,175.02	\$714.48

SDCWA & MWD Volumetric Pass-through Charges					
Uniform Rate for Bi-Monthly Pass Through Charge	SDCWA Customer Service Charge	SDCWA Emergency Storage Charge	SDCWA Supply Reliability Charge	MWD Readiness to Serve Charge	MWD Capacity Charge
<i>All Customer Classes</i>	<i>\$/HCF²</i>	<i>\$/HCF²</i>	<i>\$/HCF²</i>	<i>\$/HCF²</i>	<i>\$/HCF²</i>
	\$0.03	\$0.08	0.08	\$0.01	\$0.04

Irrigation	582,953	5.0%	553,805	7.83%
Other-Construction	10,624	5.0%	10,093	0.1%
Industrial	6,412	5.0%	6,091	0.1%
Fire Protection	525	5.0%	499	0.01%
Total	7,449,836		7,077,344	100%

1. Consumption data is based on SWA billing data.
2. A conservation factor of 5% is used.

Commodity Related Costs: Costs associated with the total consumption (flow) of water over a specified period of time (e.g. annual).

TABLE 43 : DEVELOPMENT OF THE CAPACITY ALLOCATION FACTORS

Development of the PEAK CAPACITY (MAX MONTH) Allocation Factors				
Customer Class	Average Bimonthly Use (hcf)	Avg. Bi-Mo. Peak Use (hcf) ¹	Peak Bimonthly Factor	Max Month Capacity Factor
Residential	225,740	298,431	1.32	37.0%
Multi-Family	188,405	265,058	1.41	32.8%
Commercial	104,006	137,434	1.32	17.0%
Public Agencies	24,088	41,243	1.71	5.1%
Irrigation	46,150	63,066	1.37	7.81%
Other-Construction	841	1,014	1.21	0.1%
Temporary Hydrant Meters	508	1,024	2.02	0.1%
Fire Protection	42	63	1.52	0.01%
Total	589,779	807,332	1.37	100%

1. Based on peak monthly data (highest 2-month average due to bi-monthly meter reading).

Capacity Related Costs: Costs associated with the maximum demand required at one point in time or the maximum size of facilities required to meet this demand.

TABLE 44 : DEVELOPMENT OF THE CUSTOMER ALLOCATION FACTORS

Development of the Customer Allocation Factor		
Customer Class	No. of Meters FY 2021/22022	Percent of Total
Residential	28,269	77.7%
Multi-Family	3,775	10.4%
Commercial	3,061	8.4%
Public Agencies	310	0.9%
Irrigation	781	2.1%
Other-Construction	75	0.2%
Temporary Hydrant Meters	33	0.1%
Fire Protection	92	0.3%
Total	36,396	100.0%

1. Meter count data is based on the City's billing data for June 2022.

Customer Related Costs : Costs associated with having a customer on the water system. These costs vary with the addition or deletion of customers on the system. Examples: Meter-reading, Postage and billing.
